

THE EVOLUTION OF BRAZILIAN CHORO, SAMBA AND BOSSA-NOVA

SCOTT MYERS

GRADUATE COMPREHENSIVE

for PROFESSOR STEVE MASAKOWSKI

UNIVERSITY of NEW ORLEANS

FALL SEMESTER 2014

“Trace the evolution of Brazilian Choro, Samba, and Bossa-Nova music focusing largely on harmony. Identify the major composers of each genre, and how the harmonic devices being utilized in European classical and American Jazz music may have influenced them. Also discuss how Brazilian music influenced American Jazz.”

Introduction:

Brazilian music history shares some interesting parallels and exchanges with our own American music and history. Similarly to the United States, Brazil had a large native population, was colonized by Europeans (Portuguese), and developed a heavy reliance on the African slave trade to fuel a plantation economy. As did the United States at the same early stages, Brazil started with a very Eurocentric music culture that slowly gained a unique national identity, as the irrepressible influence of the African rhythms and music traditions the slaves brought with them were incorporated into existing European music structures. Choro and Ragtime developed roughly around the same period, and both feature elements of European harmony, melody and form, with

rhythmic syncopation introduced by African slaves and interpreted by both white and free black and mixed musicians. Both samba and the blues are musics largely created by marginalized blacks, with lyrics often reflecting day to day tribulations. Bossa-Nova and Jazz both reflect a solidified sense of national identity, confidence and sophistication, as well as a logical musical progression into more complex harmony. Over the decades, more musical and social interchange between the two countries has taken place; first sheet music, then records, state sponsored performances, movies and more. That exchange has certainly influences both Brazilian and American music styles and musicians. There are certainly some important differences that are important to mention. For example, while choro music has a tradition of improvisation, the culture of the extended improvised solo that so integral to American jazz did not develop in Brazil. In a similar fashion, the weaving together of the music, dance and carnival performance aspects of samba into the Brazilian social fabric is unique in that country, as are the huge *escola de samba* (samba-school) percussion ensembles.

This paper will examine the development of choro, samba and bossa-nova, as well as parallels and musical interchanges with the United States during that development.

PART I: Choro:

The most technically demanding of the Brazilian genres, choro began its evolution sometime in the late 19th century. The precise reason why the genre is called *choro* is still under much debate, but for sanity's sake, suffice to say that the verb *chorar* means "to cry", and early musicians who played in a choro style were called "*choroãos*" or "cryers", lending credibility to the idea that the term describes a style of playing which evokes emotion. As with many other genres, including American ragtime, choro began as a style of interpretation, rather than a distinct strain of music. As was the case throughout the world before the advent of recorded music, dance, sheet music and performance styles were intrinsically linked, and European styles of music and dance were imported enthusiastically to the New World. Brazilian musicians were called on to accompany dancers in a variety of styles, including European forms such as the *polka*, *scottische* (which would transform into the Brazilian *xote*), *waltz*, *mazurka* (*Polish waltz*) and *tango* (*Spanish*). Several home-grown Brazilian born styles also contributed to the background of *choro*: *modinha*, a sentimental, lyrical style with European roots and continued influence of Italian Opera, *lundu*, an African-influenced song and dance style, and *maxixe* (a term used interchangeably with *Brazilian Tango*), an instrumental song and dance style with very strong African influences.

Little by little, as musicians and dancers with African heritage continued interpreting the European based music they were playing, more and more African rhythmic influence began to enter the music in the form of increased syncopation. Recognition that something new and uniquely Brazilian was present began to grow, and composers eventually began labeling their works as *choros*, or hyphenating their works, for example: *maxixe-choro*. The early practitioners and creators of *choro* typically held full time jobs, many in civil service and the postal service, allowing them to purchase instruments, study, and making the backyard reunions where much of *choro* was developed possible.

Musical Attributes of Choro:

- **Typical instrumentation** - mandolin, flute, *cavaquinho* (small-bodied, 4 string derivative of guitar), *violão* (nylon-stringed guitar), *violão sete cordas* (7-string nylon guitar, featuring low C string. Possibly of Russian origin), *pandeiro* (frame drum similar to tambourine, with dryer jingles). Typically the flute or mandolin carries the melody, while the cavaquinho and 6 string guitar provide chordal accompaniment, the 7-string guitar provides counterpoint bass lines, and the pandeiro provides percussion. Other instruments that are common are the piano and saxophone. As with many genres of music, choro can and has been practiced with a variety of instrumentation, but the above described is most typical.

- **Form** - A variety of forms are found, but most are two to three part forms composed of 16 bar sections, often with 8 bar melodic phrases. The rondo form AABBAACCA is by far the most common.
- **Harmonic Tendencies** - choro compositions typically modulate for each section, almost always to a closely related key. The keys of C, F, Bb and G, as well as their relative minor key counterparts are most often utilized. For songs starting a major key, the B section is often in relative or parallel minor, followed by a modulation to the subdominant or dominant key in major for the C section. Additional harmonic analysis will follow in the song analyzations.
- **Improvisation:** Although there is a tradition of improvisation in Choro, it is very unlike American jazz, in that it revolves more around interpreting and playing off of the melody in interesting ways, rather than using the harmony as a blank slate. There is some mutual improvisation in the harmonic accompaniment, I.E. the 7-string guitar bass lines. In that sense, the improvisation of the accompanists is similar to traditional New Orleans jazz.
- **Technical difficulty** Since it's earliest days, choro has had a tradition of technical difficulty. Players often have friendly competitions to show off their technical merit, and the difficulty of the compositions is often referenced in the song title is often reflected in the song title.

Important Choro Composers:

[Ernesto Nazareth](#) - A Prolific composer in a wide variety of styles, not only choro, he was also a classically trained pianist.

[Pixinguinha](#) - Founder and leader of Os Oito Batutas, the first Brazilian group to tour Europe. Important in the evolution of both choro and samba as a prolific composer, flautist, saxophonist.

[Chiquinha Gonzaga](#) - Pianist, composer and groundbreaking female artist in male-dominated field. Recognized as the first to compose a *marcha*, a form style considered a precursor to *samba*.

[João Pernambuco](#) - Master guitarist, composer of "[Sons de Carrilhões](#)", as well as other choro masterpieces. Also a member of Os Oito Batutas.

[Jacob Do Bandolim](#) - Master of the bandolim (mandolin), technically outstanding, composer of many choro standards, champion of choro tradition.

Choro Harmonic Analysis:

1. Sections typically modulate to closely related keys or parallel minor/major.
2. A sections often cycle through short progressions revolving around I, quite often landing on II- or II7 in bar 2. Secondary dominants leading to the relative minor are a common part of the A sections.
3. Sections in a minor key often start on the V7 chord.

4. Inversions creating interesting bass movement are an integral part of choro, creating added harmonic interest and movement.
5. Diminished triads can be found in passing roles such as I, #Idim, II-, and on more unusual scale degrees.
6. Secondary dominants and cyclical dominant progressions are common, notably V7/II, V7/IV.
7. Last 3-4 bars of each section are often a cyclical turnaround, with the IV, IV-, I/V(or III-), II, V7, I progression being extremely common.

Individual Song Analysis':

Atraente - Chiquinha Gonzaga, 1877:

Composed in 1877, and labeled as a polka. [Chiquinha Gonzaga](#) was a trailblazing pioneer, one of the first women composers and pianists.

A Section: F major. Starts on V7, a common theme. Last 4 bars have very stereotypical IV, IV-, I, VI, II7 (secondary dominant), V7, I.

B Section: D minor (Relative Minor) Again starts on V7. V7 of V in F makes it seem like it will return to original I, but instead it goes back to V7 of Dm.

C Section - Bb Major (Subdominant) As usual, bars preceding the end of the section have a 1-beat per chord turnaround. The Cm, Ebm/Gb, Bb, F7 portion is interesting - the Ebm/Gb is a weak dominant sound. Very trad-jazz like.

Cochichando - Pixinguinha, João de Varro e Alberto Ribeiro Davinha

A section: Dm. Typical V7/V in bar 7. Second 8 bar phrase goes to IV- for Turnaround

B Section: F Major (Relative Major) Includes a few surprise secondary dominants, creating chromatic movement in bass. IV, IV-, I, VI7, II-, V7, I turnaround at end.

C Section: D Major (Parallel) Cycle of dominants from III close first 8, same turnaround closes last 8, but with chromatic bass from B all the way to G.

Beliscando - Paulinho Da Viola, 1976 - Almost a contrafact on Cochichando, in fact title may reference Cochichando.

A section: Dm. Secondary dominants and inversions make interesting bass movement. bVI prepared by secondary dominant makes a mini-modulation.

B Section: F Major (Relative Major). I, IV-. As with many choros, references the original key before returning to F (bars 5-8). Bars 7-9 of B virtually identical to 5-6 of A. Second half of B is extended IV, IV- turnaround.

C Section: D Major (Parallel). As usual, bar 5 of D sets up a slight modulation which then returns to D. Unlike other sections, not 16 bars, not composed of two similar 8 bar sections. Bars 11 and 12 contain two unprepared and non-diatonic chords, Bb7 and Eb. Not unusual in choro. I, I7, IV7, then extended turnaround.

Conversa De Botequim, Noel Rosa and Vadico, 1935

Labeled as choro-samba, has melodic and harmonic characteristics of choro, but lyrics and shorter form of samba. Melody more difficult to sing than most sambas.

A Section: D MAJOR: in a very common choro move, first 4 bars are cyclical, with I7 pointing to IV in bar 4. After IV in bar 5, F#7, V7 of Bm creates chromatic sound and mini-modulation to relative minor. First 8 bars end on V7, creating expectation of I, but instead going back to V7/IV. Same progression for second 8 bars, but resolves, then modulates to subdominant for B.

B Section: G MAJOR (Dominant) quickly slides into cycle of dominants on first 8.

Please see Addendum at last page, for additional harmonic analysis of compositions by Pixinguinha.

PART II - SAMBA

As with *choro*, there is still active debate on the origins of the term *samba*. Not only is there debate on the etymology of the actual word *samba*, there is debate regarding where the style originated, with some historians arguing that it developed as a distinct style in the state of Bahia, while others maintaining that samba did not develop distinctly until the Afro-Brazilian influence of Bahian musicians encountered and mixed with existing urban genres in Rio De Janeiro in the early 1900's. What appears to be beyond debate is that the rhythmic DNA of the style comes from African music and

dance traditions practiced by slaves and free Afro-Brazilians in the state of Bahia. The African cultural practice of circle dances, practiced by Afro-Brazilians in Bahia and accompanied by voice, clapping and percussion, is recognized as a precursor and rhythmic ancestor of what was to become *samba*.¹ The circle dances often included the touching of the navels as an invitation to dance, the Angolan word for which is *semba*, one strong possibility for the etymological background of the word *samba*.² As the city of Rio De Janeiro grew in size and economic power, immigrants from poorer or more rural areas of Brazil flooded in to the urban center, including many Afro-Brazilians from the state of Bahia. Once settled in Rio, they continued many of their Afro-Brazilian cultural and religious practices, often gathering at the house of an influential *tia*, which means “aunt”, and denotes a revered female worship leader in the Afro-Brazilian religious traditions. It was at the house of one such *tia*, Tia Ciata, in the *Praca Onze* neighborhood of Rio De Janeiro, that many of the founding fathers (and mothers) of samba gathered to jam. Amongst them were what would become very important names in Brazilian music history: Pixinguinha, Sinhô, Donga, Heitor De Prazeires and others.² The first composition to be titled and officially registered as a samba was “Pelo Telefone”, claimed by Donga in 1916, causing quite a bit of distress amongst his fellow musicians, as it was known as a communal creation of the various participants of the jam sessions at Tia Ciata’s house. As samba gained recognition and popularity, it soon began to appear in Rio’s carnival celebrations competing with and co-existing with *marcha*, a less syncopated Brazilian genre. Once it became established as a distinct, homegrown genre, Samba flourished, becoming Brazil’s most popular national style,

and sub-genres flourished, such as *samba-cancão* (more harmonically advanced, gentler samba typically accompanied by romantic lyrics), *samba-enredo* (practiced by the *escolas de samba*, which are enormous groups of percussion players and dancers that parade during carnival), and more genres beyond the scope of this paper.

Musical attributes of Samba

- Samba is felt in a strong duple meter, typically notated in 2/4. As Jovino Santos Neto describes it, samba and many other Brazilian feels are rhythmically evolved from the African circle dances, in which participants in the circle would step from side to side. As a result, most Brazilian music implies a very strong “bi-lateral” or side-to-side motion, samba being one strong example.¹
- Lyrically oriented; samba written as instrumental music does not really exist. A large portion of the samba spectrum contains refrains that are sung in unison between verses.
- Since samba evolved for the most part from the same harmonic roots as choro, it exhibits many of the same harmonic characteristics described, such as cyclical 4-8 bar passages revolving around the tonic, non altered secondary dominant chords, diminished passing chords, sections beginning on the V7.
- Notable differences from choro: instrumentation typically utilizes much more percussion, forms are simpler, modulations much less frequent, harmony moves slower and does not have the focus on inversions creating moving bass lines.

May contain occasional harmonic surprises, but not the unprepared major triads found in choro.

- A wide range of styles and instrumentation fall under the umbrella term *samba*, from harmonically simple but rhythmically rich *samba de raiz* or *samba do morro*, to harmonically rich *samba-canção*, to *samba-enredo* practiced by *escolas de samba* with 100 or more percussion players, to *partido-alto* or *pagode*, which are sometimes interchangeably used terms to denote pop-samba or samba that features improvised lyric verses.

Selected Important Samba Composers:

Donga

Sinhô

Turma de Estácio de Sa -

Pixinguinha

Ary Barros

Cartola

Paulinho Da Viola

Samba Song Analyzes:

Com Que Roupas: - Noel Rosa, 1929. [Chart](#) Starts on I, V7, I. #Idim to II-. Includes IV, #IV, I/V, VI, II-, V7, I, turnaround.

Jura: - Sinhô, 1929. [Chart](#) | I | I | V7 | V7 | V7 | V7 | I | I |, common progression.

Non-altered secondary dominants of II and V. Second half of A section contains IV, #IV, I/V, V7/II, V7/V, V7, I, turnaround. B section or bridge starts on V7, melody note is b7.

A Rita - Chico Buarque, 1966 [Chart](#) 1966 was well after Bossa-Nova had taken off.

This recording is somewhat of a middle ground, percussion and drums more samba, singing more bossa. Bars 9-10 have sequential II- V7 movements, Bars 13-16 contain an interesting progression: B13 | B7b13| Bm | Bbdim7| The next section starts on Bm7. The harmony definitely seems a little more II- V7, or Jazz/Bossa oriented.

Argumento: Paulinho Da Viola, 1976. [CHART](#) Completely diatonic, except for two passing diminished chords, a V7/II, and a IV/IV, V7/V. Also contains the same | IV | #IVdim | I/V | V7/II | II- | V7 | I | turnaround. Very, very close to Com Que Roupa. The lyrics talk about defending the idea of classic samba, so it is highly likely that there could be a connection between the two tunes.

Samba Listening Examples:

1. [PELO TELEPHONE](#) - Donga, 1916.
2. [COM QUE ROUPA](#) - Noel Rosa, 1929
3. [JURA](#) - Sinhô, 1929
4. [SE VOCE JURAR](#) - Ismael Silva, 1931
5. [A Rita](#), Chico Buarque, 1966

6. [ARGUMENTO](#) - Paulinho Da Viola, 1976

PART III - BOSSA NOVA AND JAZZ

The late 1950's and 1960's saw the birth of one of the most influential Brazilian music movements of all time, *bossa nova*. During the 1950's, Brazil was in the midst of an exciting period of growth, optimism and modernism. The recently re-elected president Juscelino Kubitschek had run on a platform promising "50 years progress in 5 years", and a brand new capital city, Brasilia was being designed and built by renowned architect Oscar Neimeyer.³ It was in this atmosphere of optimism and modernism that the bossa nova was born. Many of the innovators of the genre, including Antonio Carlos Jobim, João Gilberto, and Vinicius De Moraes were college educated and raised in a middle to upper class lifestyle. Their social status and education factored heavily in this new genre in the poetic optimism and sophistication that is a hallmark in the lyrics and harmony of the genre. The Bossa Nova movement would seek to represent

sophistication, class, modernism and optimism while at the same time retaining its unique Brazilian soul.

American music, film and popular culture had been popular in Brazil for many years, so there is little doubt that the Brazilian musicians involved in the development of bossa nova did not pick up some influence from American music, but quite a bit of cultural interchange had already taken place by the time bossa nova came on to the scene. Carmen Miranda and her cartoonish version of samba was already well known in the United States via Hollywood. The crooning tradition of Frank Sinatra was popular in both countries; a Brazilian singer in the same vein named Dick Farney spent some successful years in the United States before returning to Brazil a well known icon. Brazilian guitarist Laurindo Almeida left Brazil in 1947 and soon began performing with Stan Kenton's, long before bossa nova's birth. Meanwhile, samba-canção, a romantic, slower samba subgenre, already contained a high degree of harmonic complexity. In other words, while Brazilian musicians were undoubtedly influenced to a degree by American jazz (as were American musicians by Brazilian genres), the ingredients for bossa nova had existed in Brazil for many years in Brazil, and the genre was not a Brazilian attempt to copy the success of the West Coast cool jazz sound, as is sometimes believed.

Several events factored into the bossa nova development:

1. The beginning of Antonio Carlos Jobim and Vinicius De Moraes' songwriting partnership, with the stage play *Orfeu de Conceição* (1956), which would be made into the film *Orfeu Negro* (1959) by French filmmakers and introduce scores of foreigners to Brazilian music, Jobim and Luiz Bonfá. The partnership between Jobim and De Moraes is one of the most fruitful and important in the history of Brazilian music. From the music for the stage play, "[Se Todos Fossem Iguais Voce](#)", released in 1956 is a good example of the style of singing that was common at the time - far more operatic than what is recognized as bossa nova.
2. João Gilberto's revolutionary guitar and vocal technique, which essentially subtracted everything and anything not absolutely essential, while keeping the swing of samba present in the underpinnings of his playing. Previous singing approaches in Brazilian music were more operatic, louder and featured vibrato. Gilberto essentially went 180 degrees opposite with his approach, singing as quietly as possible, and with no vibrato. The calm, almost speaking quality of his singing, and his bare but essential comping came to represent the essential underpinnings of bossa nova.
3. Popularity in the United States. After a state department tour of Brazil in 1961, Charlie Byrd was inspired to create an album in the style he had heard in Brazil, and *Jazz Samba*, with Stan Getz was recorded and released in 1962, with surprising success, including a Grammy award. The success of bossa nova in the United States was certainly not responsible for the creation of the genre, but

did imbibe momentum and energy into the movement, as well as bolstering the careers of many of the musicians, most notably Jobim. Jobim would spend substantial time in NYC, recording albums with a mixture of Brazilian and American musicians, and some of his later compositions, created after spending considerable time in the U.S., show a heavier jazz influence.

Musical Characteristics of Bossa Nova:

- Compared to samba, very little auxiliary percussion; typically just drum set and optionally, shaker. Guitar takes a more central role as main timekeeper/percussion instrument.
- Extremely intimate performance style, with the vocalist often singing quite quietly and without extreme dynamic range or vibrato. Vocals are typically limited to one person or a duet, eschewing the verse/refrain structure of samba where everyone would sing the refrain.
- Lyrics can be more impressionistic, optimistic and poetic. Still laden with emotional content, just not as direct and melodramatic.
- Instrumentation more closely reflects that of an American jazz combo, typically acoustic guitar and/or piano, acoustic bass, drum set and singers. Some albums feature string arrangements, often recorded in the U.S.
- Drum set players often used brushes, or one brush and one stick (used crosswise on snare), unusual for the time.

- Harmonic/melodic divergences from samba - more extended harmony, a lot of tritone substitution and half-step resolutions, slower harmonic movement (often 4 beats per chord), inclusion of unusual notes in the melody (a la Desafinado).
Less focus on revolving around I.

Possible Harmonic Connections with Jazz

- Jobim's One Note Samba has been compared with the introduction of and parts of Cole Porter's Night and Day, in that chords are moved under a stationary melody note. Jobim himself pointed out that this is a common device employed by classical composers. It is well known that Jobim admired and studied classical composers, and his composition "Insensatez" is based on Chopin's Prelude No 4.
- Jobim's Girl From Ipanema, So Danço Samba and Billy Strayhorn's Take the A Train are very similar in their A sections. "Watch What Happens" also shares virtually the same harmonic movement. Strayhorn's composition is the earliest, and it is likely that Jobim would have played it during his years playing in night clubs, but at the same time, it is a very common chord progression - the II dominant is very common in samba as well.
- As Bossa Nova progresses, ii-V progressions become a common device, used in steps or chromatically. "Wave", "Triste" and "One Note Samba" all contain sections of ii-V7 I progressions that resolve down in steps. Sequential ii-V

progressions, and non-resolving ii-V progressions seem to be a strong link to jazz harmony.

Selected Bossa Nova Composers and Performers:

Antonio Carlos Jobim - Bossa Nova's most prolific composer, he and João Gilberto were the driving force for the new style. Extremely well studied and knowledgeable about classical as well as many types of popular music.

Luis Bonfá - Composer of "Manha de Carnaval", one of the most popular Bossa Nova compositions amongst Jazz musicians, which became famous via the French film "Black Orpheus". An accomplished solo guitarist.

Roberto Menescal - Composer of "O Barquinho"

Charlie Byrd - Along with Stan Getz, Charlie Byrd introduced Bossa Nova to the American audience with the album "Jazz Samba".

João Gilberto - Along with Jobim, Gilberto is widely recognized as having created the signature Bossa Nova sound through a combination of his reductive guitar style and intimate, vibrato-less singing style.

Vinicius De Moraes - One of the most well regarded poets in Brazil, as well as a literal diplomat. His partnership with Jobim bore some of the most fruitful works of the Boss era.

INFLUENCE OF BOSSA NOVA ON JAZZ

- Last “sophisticated” music to grasp general public’s attention before rock/pop took over. Most well known jazz artists made at least one bossa album, as the recognized it as a way to ride the wave of popularity.
- Many Jobim tunes and a few others became standards, Girl From Ipanema 2nd most recorded song in history.
- Contributed to the rhythmic diversification of modern jazz, leading the way away from swing, to the straighter, more varied feels now common.
- Most jazz composers have written in the bossa nova style, and any professional musician can interpret a standard in the feel. Not necessarily true for other world music feels.

Conclusion:

Fascinating to research, the development of the genres of choro, samba and bossa-nova bears interesting parallels and divergences from the evolution of American music. Similar social condition and similar European and African music influences are responsible for the similarities, while language (it is impossible to imagine that the sonority of Portuguese has not affected Brazilian music), dance, climate and other factors differentiate the music of the two countries. From an early in the 20th century, American music, film and culture was a popular import in Brazil, and big band swing, bebop, and cool jazz certainly worked their way into the collective consciousness of Brazilian musicians. Bossa Nova likely owes elements of its cool, sophisticated feel,

instrumentation and harmonic language to jazz, while the repertoire of American jazz musicians is forever improved by the addition of Antonio Carlos Jobim and others' compositions. Accomplished musicians on both continents can play a passable swing or bossa nova feel, further strengthening the musical connection between the countries and opening the opportunities for musical expression and interaction. Brazilian music has influenced American musicians, and vice versa; pinning down exactly what was exchanged harmonically is perhaps futile, given that Jobim, Ellington, Gershwin and many other composers from both countries studied European classical music intently. On the other hand, some interchanges are easily identified - jazz donated to Brazil its unique tradition of extended solo improvisation, the jazz band instrumentation, the electric guitar, and the usage of brushes on drums set, while Brazil provided a huge palette of new rhythms to American musicians as well as many beautiful compositions that are now a part of standard jazz repertoire. Indeed, the bossa-nova influx came at a time when American jazz was at somewhat of a standstill, and infused new energy and ideas into the music. Choro and samba are not as well known and understood in the United States, as are bebop and ragtime or traditional jazz in Brazil, but virtually any professional musician in either country can sit down and play with each other in the swing and bossa feels, a testament to the strength and interchange between the two countries.

Addendum: Harmonic Analysis of a selection of compositions by Pixinguinha:

Harmonic Tendencies:

- AABBACCA Form
- Typically movements from section to section are to a closely related key, either parallel or relative major/minor or to the V, I.E. from C major to G major.
- In most cases, when the section starts on minor, first chord is V7
- In most cases, when the A or B section starts on Major, second chord is II of some flavor. C Section is usually major, but usually does not
- Last 3-4 bars are usually a turnaround, often IV, IV- etc.

- Some unprepared major triads are used as a harmonic surprise.
- Section C often starts with 3 bars of Major I. Um A Zero, Seu Lourenço No Vinho, Segura Ele, Descendo a Serra
- Diminished triads are common, either as passing tones to II or V, or in more unusual scale degrees.

Acerta O Passo: AABBACCA

A: C Major. Bar 2 ii-

B: Am

C: F maj

Ainda Me Recordo: A (31) B(20)C(15)

A: Fmaj. bar 2 ii-

B:Fm

CAbmaj

Descendo A Serra: AABBACCA

A: C Major

B: G Major - Bar 2- II7. Has Eb maj triad as side slip bar 13 of B

C: F Major - Has Db maj triad where typically Bbm would be found.

Naquele Tempo: AABBACC

A: Dm (starting on V7)

B: F Major

C: D Major

Os Oito Batutas: AABBACCA

A: G Major

B: D Major (Starts on V7)

C: C Major

Proezas De Solon: AABBACC

A: F Major

B: Dminor (Starts on V7)

C: Bb Major

Sedutor: AABBACC

A: D minor (starts on IVm)

B: F Major

C: D Major

Segura Ele: AABBACC

A: C Major

B: A Minor/C (starts on V7)

C: F Major

Seu Lourenço No Vinho: AABBACC

A: C Major (starts on V7). Modified IV- turnaround last 4

B: Am (Starts on V7)

C: F major. modified IV- turnaround last 4
